Appendix 3 Macabre Anchor Lexicon

This appendix reproduces the frozen, study-specific macabre anchor lexicon used to identify direct lexico-syntactic associations with body terms. It contains 66 candidate anchors: 52 retained in the primary analysis and 14 excluded because they required contextual semantic disambiguation.

Included anchors entered the primary dependency network. Excluded candidates remained in the documented lexicon but were omitted from the primary analysis because direct syntax alone could not reliably determine their macabre sense. Where a lemma admitted more than one part of speech or relation pattern, the rules are combined in a single row.

Grammatical codes

N = noun; J = adjective; V = verb; AMOD = anchor adjective modifies the body term; SUBJ = body term is the active subject; PSUBJ = body term is the passive subject; OBJ = body term is the object; NMOD-B = anchor noun is a nominal modifier of the body term; B-NMOD = body term is a nominal modifier of the anchor; COMP-B = anchor noun is a compound modifier of the body term; B-COMP = body term is a compound modifier of the anchor.
